

Claims

I claim:

1. The invention of transportation vehicles using diamagnetic propulsion such as cars, trains, boats, air planes, space crafts, motorcycles, trucks, toys, tools and weapons which have one or more diamagnetic rotors and one or more directional rotors; or in case of diamagnetic generator, will have one or more diamagnetic generators and one or more directional generators that makes them levitate from the surface. (Apply Important Systems)
2. The invention of a projectile system and projectile cannons that use diamagnetic propulsion. It will have a base with one or more generators of rotors or one or more diamagnetic generator systems. Less energy will be applied for a short lapse of time. (Apply Important Systems)
3. The invention of toys and/or entertainment goods, such as: control remote vehicles, guns, airplanes, boats, trains, pendulum, decorations, tools, etc., that move using the diamagnetic propulsion. (Apply Important Systems)
4. The invention of a motor that produces mechanical power in an axis that rotates by diamagnetic generators or rotors.(Apply Important Systems)
